Contents

1	Financial Mathematics: An Overview	1
1.1	Introduction	1
1.2	Some Basic Terminology	2
1.3	Certain Assumptions	5
1.4	Derivative Securities	10
1.5	Some More Terminology	16
1.6	Summary and Additional Notes	25
1.7	Exercises	26
2	Forward and Futures Contracts	29
2.1	Introduction	29
2.2	Forward Contract	29
2.3	Forward Price Formula	31
2.4	The Value of a Forward Contract	36
2.5	Futures Contract	39
2.6	Futures Pricing	42
2.7	Swaps	44
2.8	Value of Commodity Swap	45
2.9	Summary and Additional Notes	46
2.10	Exercises	46
3	Basic Theory of Option Pricing-I	49
3.1	Introduction	49
3.2	Basic Definitions and Preliminaries	49
3.3	Behavior of Option Prices With Respect to Variables	56
3.4	Pay-off Curves of Options Combinations	59
3.5	Single Period Binomial Lattice Model for Option Pricing	61
3.6	Multi Period Binomial Lattice Model for Option Pricing	68
3.7	Existence of Risk Neutral Probability Measure	74
3.8	Pricing American Options: A Binomial Lattice Model	84
3.9	Options on Dividend Paying Stock	89
3.10	Notion of Complete Markets	93

3.11	Summary and Additional Notes	95
3.12	Exercises	96
4	Basic Theory of Option Pricing-II	99
4.1	Introduction	99
4.2	The CRR Model	100
4.3	Matching of CRR Model with a Multi-Period Binomial Model .	105
4.4	Black-Scholes Formula for Dividend Paying Stock.....	114
4.5	The Greeks	118
4.6	Summary and Additional Notes	124
4.7	Exercises	126
5	Portfolio Optimization-I	129
5.1	Introduction	129
5.2	Risk and Return of an Asset	129
5.3	Portfolio Optimization Problem	131
5.4	Two Assets Portfolio Optimization	133
5.5	Multi Asset Portfolio Optimization	139
5.6	The Minimum Variance Set, The Minimum Variance Point and the Efficient Frontier	143
5.7	Capital Asset Pricing Model (CAPM)	149
5.8	Summary and Additional Notes	160
5.9	Exercises	162
6	Portfolio Optimization-II	167
6.1	Introduction	167
6.2	Markowitz's Model: Some Theoretical and Computational Issues	167
6.3	Mean Absolute Deviation Based Portfolio Optimization: A L_1 -Risk Model	169
6.4	Minimax Rule Based Portfolio Optimization: An L_∞ -Risk Model	175
6.5	Value-at-Risk of an Asset	187
6.6	Conditional Value-at-Risk	193
6.7	Preference Relation, Utility theory and Decision Making	198
6.8	Mean-Variance Model Revisited in Utility Frame Work	202
6.9	Risk Modeling and Financial Risk Measures	203
6.10	Stochastic Dominance and Portfolio Optimization	208
6.11	Portfolio Optimization with Stochastic Dominance Constraints	210
6.12	Summary and Additional Notes	210
6.13	Exercises	212
7	Stochastic Processes	215
7.1	Introduction	215
7.2	Definitions and Simple Stochastic Processes	216

7.3	Brownian Motion and its Properties	229
7.4	Processes Derived from Brownian Motion	232
7.5	Summary and Additional Notes	239
7.6	Exercises	239
8	Filtration and Martingale	243
8.1	Introduction	243
8.2	Conditional Expectation $E(X/Y)$ and Calculation Rules	244
8.3	More on σ -Fields	248
8.4	Filtration	252
8.5	Conditional Expectation $E(X/\mathcal{F})$ and Calculation Rules	255
8.6	Martingales	259
8.7	Summary and Additional Notes	271
8.8	Exercises	272
9	Stochastic Calculus	277
9.1	Introduction	277
9.2	Variations of Real-Valued Functions	278
9.3	Variations of Brownian Motion	281
9.4	The Riemann and The Riemann-Stieltjes Integrals	285
9.5	Stochastic Integral and its Properties	288
9.6	Ito-Doebelin Formula and its Variants	292
9.7	Stochastic Differential Equation	296
9.8	Some Important SDE's and their Solutions	303
9.9	Summary and Additional Notes	305
9.10	Exercises	307
10	Black-Scholes Formula Revisited	311
10.1	Introduction	311
10.2	Change of Probability Measure	312
10.3	Girsanov Theorem	318
10.4	Discounted Portfolio Process	320
10.5	Risk Neutral Pricing Formula	323
10.6	Feynman-Kac Theorem and BS Formula	326
10.7	Summary and Additional Notes	329
10.8	Exercises	330
11	Interest Rates and Interest Rate Derivatives	333
11.1	Introduction	333
11.2	Bond Price	334
11.3	Term Structure of Interest	339
11.4	Forward Rates	345
11.5	Binomial Lattice Approach for Term Structure	352

11.6	Vasicek Model	356
11.7	Cox-Ingersoll-Ross Model	359
11.8	Partial Differential Equation	362
11.9	Summary and Additional Notes	367
11.10	Exercises	368
12	Optimal Trading Strategies	373
12.1	Introduction	373
12.2	Introduction to Market Structure	374
12.3	Various Types of Orders in the Market	377
12.4	Execution Models	381
12.5	Static Optimal Strategies for Risk Neutral Investor: A Dynamic Programming Approach	384
12.6	Static Optimal Strategies for A Risk Averse Investor: A Dynamic Programming Approach	386
12.7	Dynamic Models	389
12.8	Limitations of Dynamic Programming	392
12.9	Quadratic Programming Approach for Optimal Execution: Static Models	394
12.10	Quadratic Programming Approach for Optimal Execution: Dynamic Models	398
12.11	Summary and Additional Notes	409
12.12	Exercises	410
13	Credit Risk Management	411
13.1	Introduction	411
13.2	Basic Terminology	413
13.3	Expected Default Losses on Bonds	414
13.4	CreditMetrics Analysis	416
13.5	Credit VaR and Credit CVaR	419
13.6	Credit Risk Optimization with CVaR Criteria	429
13.7	Credit Scoring and Internal Rating	433
13.8	Construction of Credit Scoring Models	436
13.9	Logistic Regression	437
13.10	Fisher's Linear Discriminant Analysis	439
13.11	Support Vector Machines	440
13.12	Drawbacks	442
13.13	Summary and Additional Notes	443
13.14	Exercises	444
14	Monte Carlo Simulation	445
14.1	Introduction	445

14.2	Generating Random Numbers	446
14.3	Generating Random Variables	449
14.4	Monte Carlo Techniques	458
14.5	Applications in Finance	459
14.6	Summary and Additional Notes	462
14.7	Exercises	463
15	MATLAB Codes for Selected Problems	
	in Finance	465
15.1	Introduction	465
15.2	Binomial Lattice Model for European and American Call Option/Put Option	465
15.3	CRR Model for European and American Call Option/Put Option	468
15.4	Black Scholes Formula for Dividend and Non Dividend Paying Stock	471
15.5	Minimum Variance Portfolio	473
15.6	Markowitz Efficient Frontier	474
15.7	Markowitz Efficient Frontier: User Specified Data	475
15.8	CAPM with Generic Input Parameters	477
15.9	Geometric Brownian Motion using Simple Random Walk	479
15.10	Binomial Lattice for Bond Price and Interest Rate Modeling ..	480
15.11	European/American Call Options via Monte Carlo Method ...	482
	References	485
	Index	495
